LOGISTICS

Ammo conservation

Ammo conservation is the most important aspect for a unit, without ammo there is no security, without ammo we cannot achieve any of our objectives. Hence why we have different techniques for ammo conservation.

- Methods of ammo conservation
 - Fireorders
 - Positioning
 - Preparation

Vehicle security

Personnel Carriers, should be kept a safe distance away from combat, and should be used sparingly. Tanks and other fighting vehicles should be kept at more effective distances, using the proper terrain coverage. Any loss of vehicle is unacceptable.

ACE

First aid

For first aid we use ACE medical menu (AMM). Pressing H we have access to the healing menu where we can interact with the wounded. It's important to keep three things in mind while working with the patient.

- Ensure all wounds are closed/mitigated
- Ensure airways are healthy and not obstructed
- His Blood Pressure and O2 are stable

Radio usage

Every soldier has access to a short range radio, which they can access using ctrl + p. We can set multiple channels for frequencies depending on the radio. On the radio the only chatter which is permitted is that which is formatted, well put together statements containing all necessary information. Inside your fireteam, speaking your native tongue, while outside of your fireteam, speaking english. If somebody is transmitting on the radio, they will be unable to hear anything on that frequency until they have stopped transmitting, that's why it's important to use over and out to signal if we want an answer for our transmission, or that we finished with our transmission. There are many outside factors that influence radio usage, the terrain, enemy jammers, etc. Make sure to talk in short transmissions as the enemy can track down our radio signals. The format is the following:

- Identify self
- Identify Target of Message
- Message
- Over/Out

BASICS

SERE

If you ever get lost, or your entire fireteam gets lost, it should be reported as soon as possible. Performing a long stop, you or your fireteam should reorient while maintaining security, then head towards the general area of friendly lines. Don't forget to drink from your canteen at short/long stops to be able to perform your duties without problems.

Pistol and Rifle knowledge

Every soldier should be able to use his weapons efficiently and safely.

- Always treat weapons as if they were loaded.
- Do not ever aim at things you don't want to destroy.
- Only put your finger on the trigger when you want to fire the weapon.
- Know what you are shooting at, and what's behind it.
